RAW WATER INTAKE STRUCTURE PILE BENT REPLACEMENT
Project No. WWKS 112Project Scope:

CONSULTANT shall perform the scope of services described in the following paragraphs.

Topographic Surveying Services: A topographic survey will be conducted as a part of the design phase to ascertain the location of all existing improvements and utilities and to measure the existing infrastructure of the raw water intake structure pile bents needing replacement. CONSULTANT shall use in-house personnel to provide surveying services for the project. Their scope of work will include establishing baselines and temporary benchmarks in the vicinity of the project, a topographic survey of existing manmade and natural features, and identifying all aboveground and identifiable subsurface utilities, including contacting Louisiana One Call. Providence will locate all apparent rights-of-way.

Geotechnical Investigation Services: A geotechnical investigation will be conducted as part of the design phase to verify the existing soil conditions and to determine if the remaining portion of the timber piles can withstand the load of the new steel extensions. CONSULTANT shall use a licensed Louisiana geotechnical firm, Adaptive Management and Engineering, LLC (AME) to provide these services for the project. Generally, AME's scope of services will consist of two undisturbed soil borings 100 feet in depth. AME will also be applying and acquiring all permits required for the borings to occur since the project site includes the USACE levee. A copy of AME's proposal and full scope are included as an attachment to CONSULTANT's proposal.

Permitting: Permits will be obtained as part of the design phase. Providence will, in coordination with St. Charles Waterworks, prepare a Joint Permit Application (JPA) for submittal to the Louisiana Department of Natural Resources (LDNR), Office of Coastal Management (OCM) and the U.S. Army Corps of Engineers (USACE) and will provide liaison assistance with the relevant agencies throughout the JPA's review process. These permits will be needed to complete any construction activities within the Coastal Zone and USACE rights-of-way.

Design: During this phase CONSULTANT will prepare and present to the OWNER multiple options for the repair/replacement of the deteriorated timber piles based on the geotechnical information provided by AME. These options will include an estimate for each option. Once an option is chosen CONSULTANT will prepare and develop 60% plans, specifications, cost opinion for review and comment by OWNER.

Following the acceptance of these submittals, CONSULTANT will proceed to a 100-percent submittal which will constitute the construction documents for the project.

Plans will be prepared on the 22" x 34" media. CONSULTANT will utilize their standard general conditions and construction agreement and associated documents for the preparation of

specifications (Contract Documents) unless another form is preferable to the OWNER. Technical specifications will be CONSULTANT's standard format as modified to meet local preferences and conditions.

Bid Phase: For this task CONSULTANT will assist OWNER in obtaining bids for the project in accordance with State Bid Law requirements. CONSULTANT will prepare contract documents, assist the OWNER in advertising for bids, conduct a prebid conference, issue addenda as necessary, attend the bid opening, and prepare a recommendation to award for the OWNER as part of this phase.

Construction Administration: Following the acceptance of bids CONSULTANT will provide construction-phase services for the construction of the project.
