

B APPENDIX

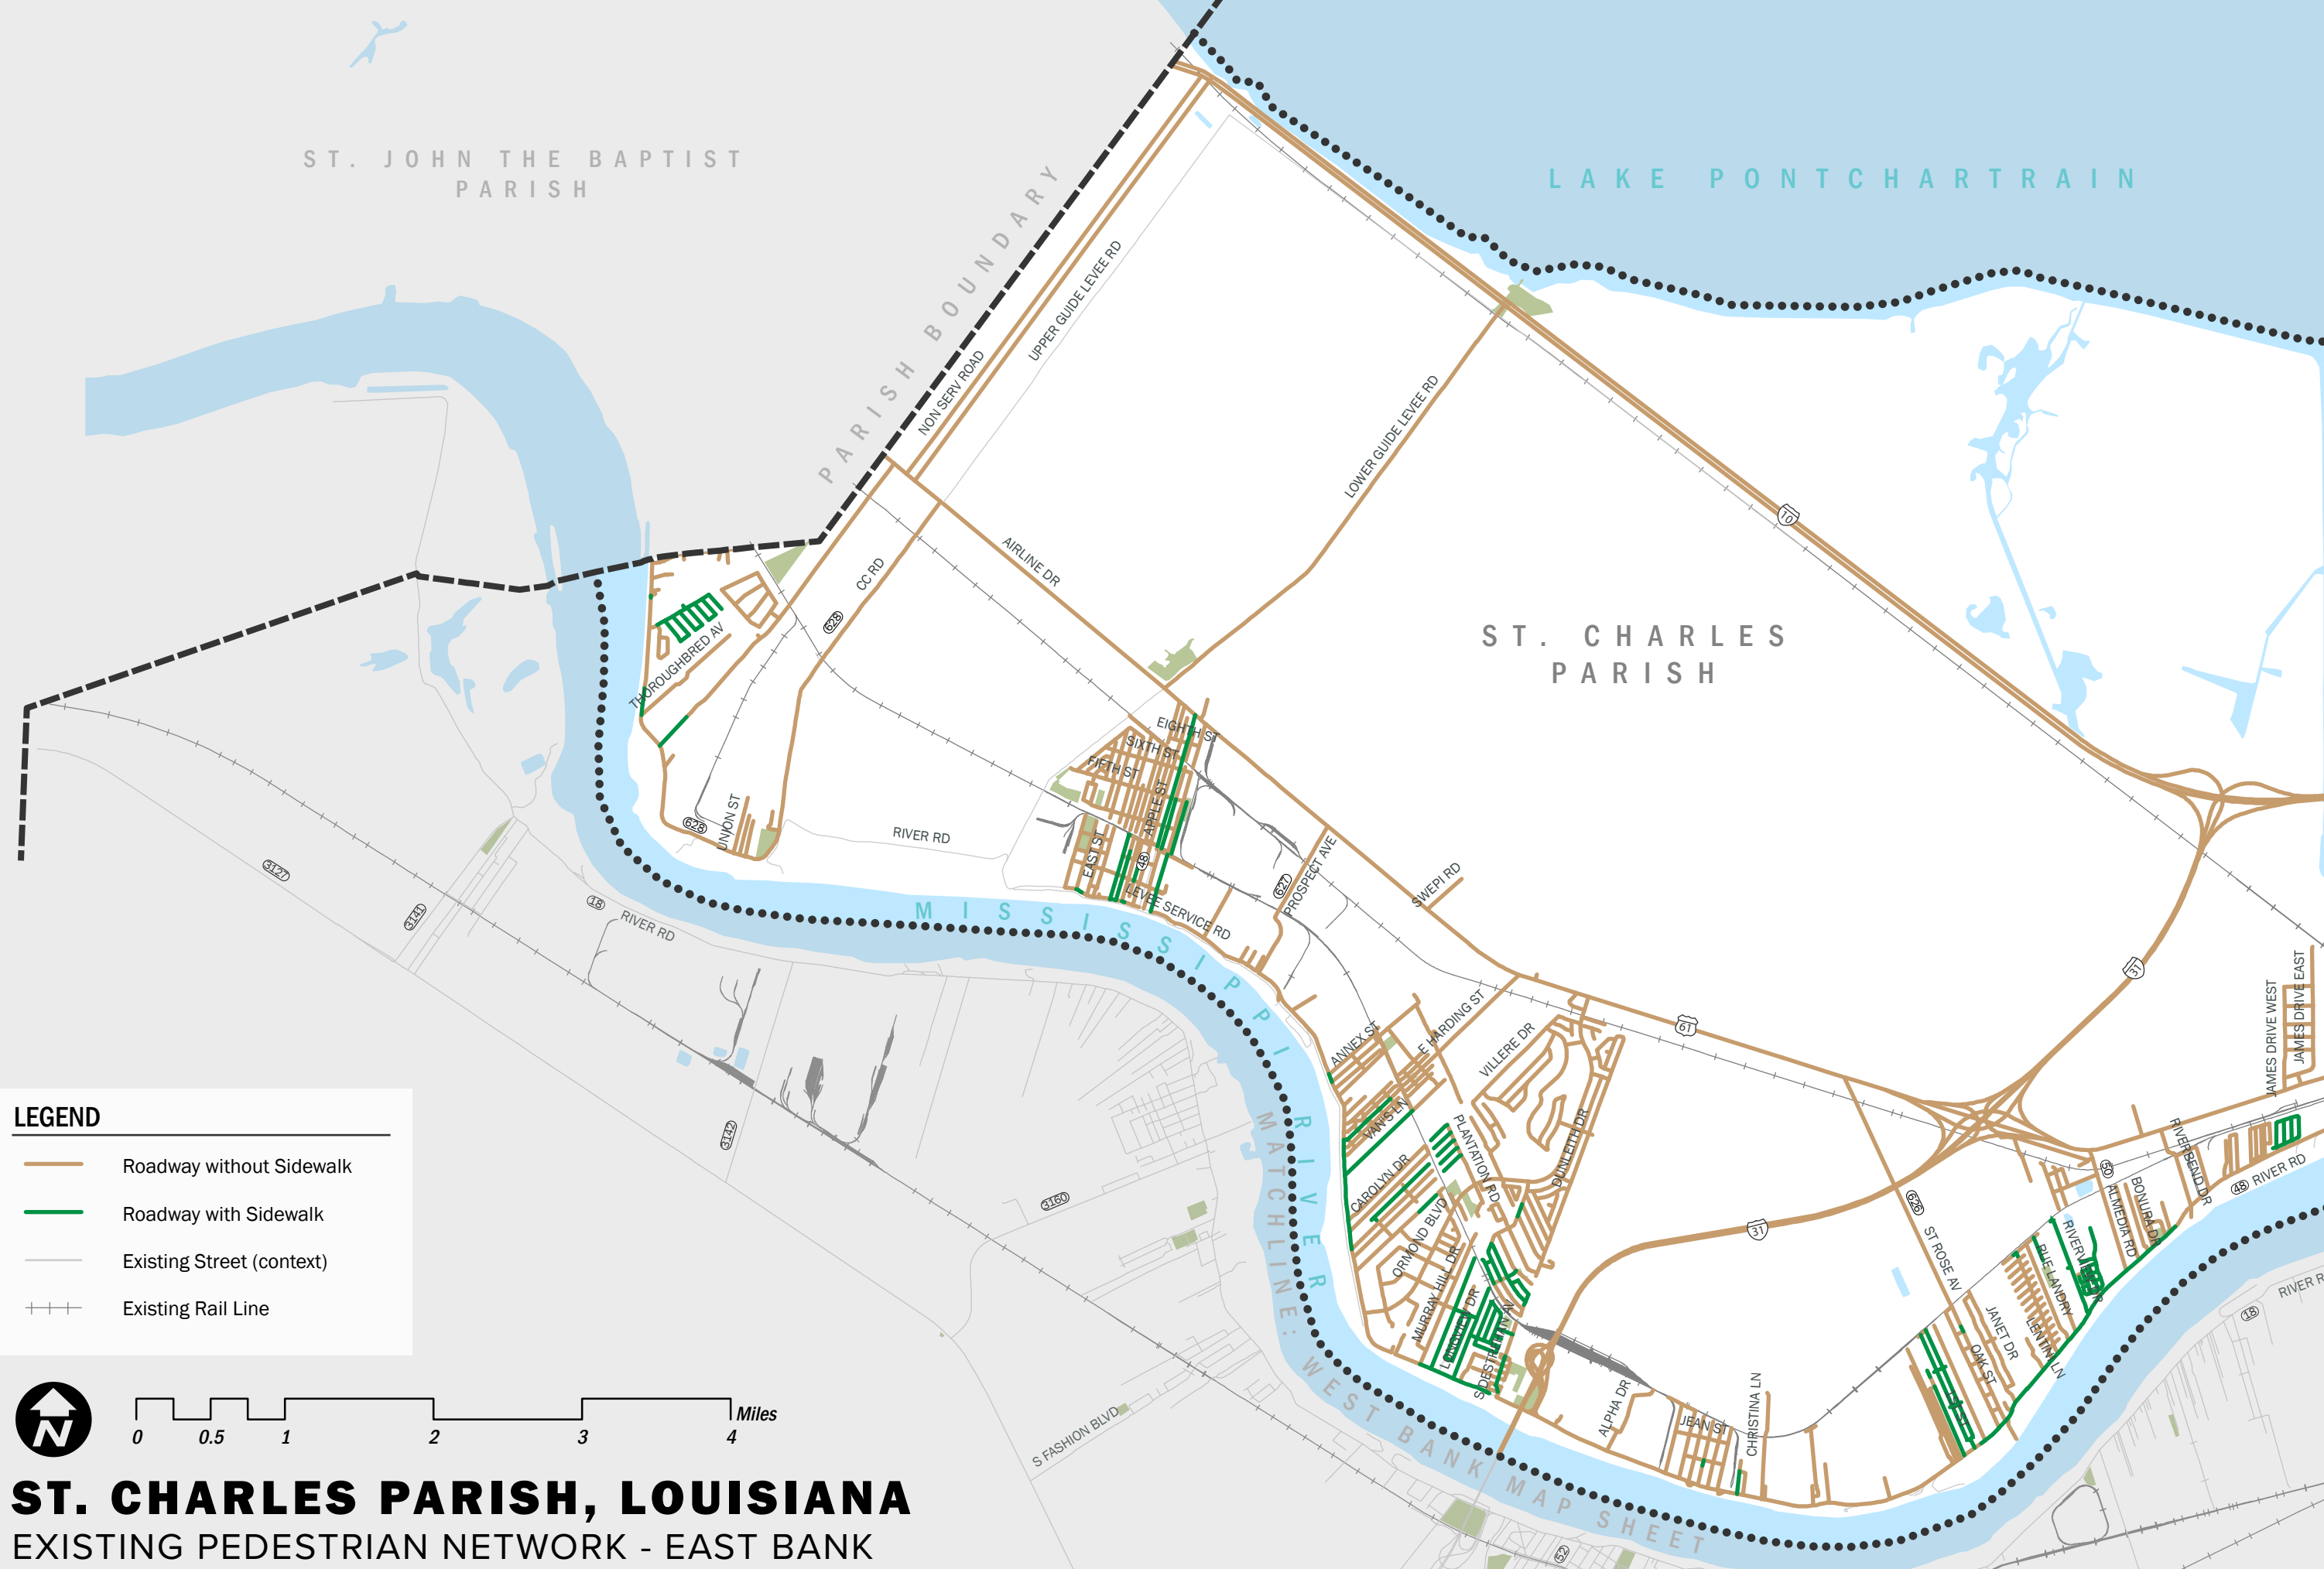

MAPS

This page intentionally left blank

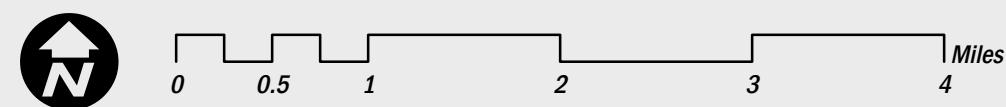

Appendix B consists of maps created by the project team to display existing pedestrian and bicycle networks and destination locations, and those developed by the public on hand-drawn physical maps supplied to them during the visioning workshops. Each map type is available for each sub-area.

This appendix also includes a snapshot of LADOTD's Bicycle Planning Tool that represents bicycle network analysis and model output for the purpose of recommendations. This image was captured while focusing on St. Charles Parish, although the tool includes the extent of the State of Louisiana. The legend for the mapping tool rates routes based on bicycling conditions and the level of demand, ranging from green (good BLOS and low demand) to red (poor BLOS and high demand.) This tool is publicly available as a webmap through the LA DOTD website.

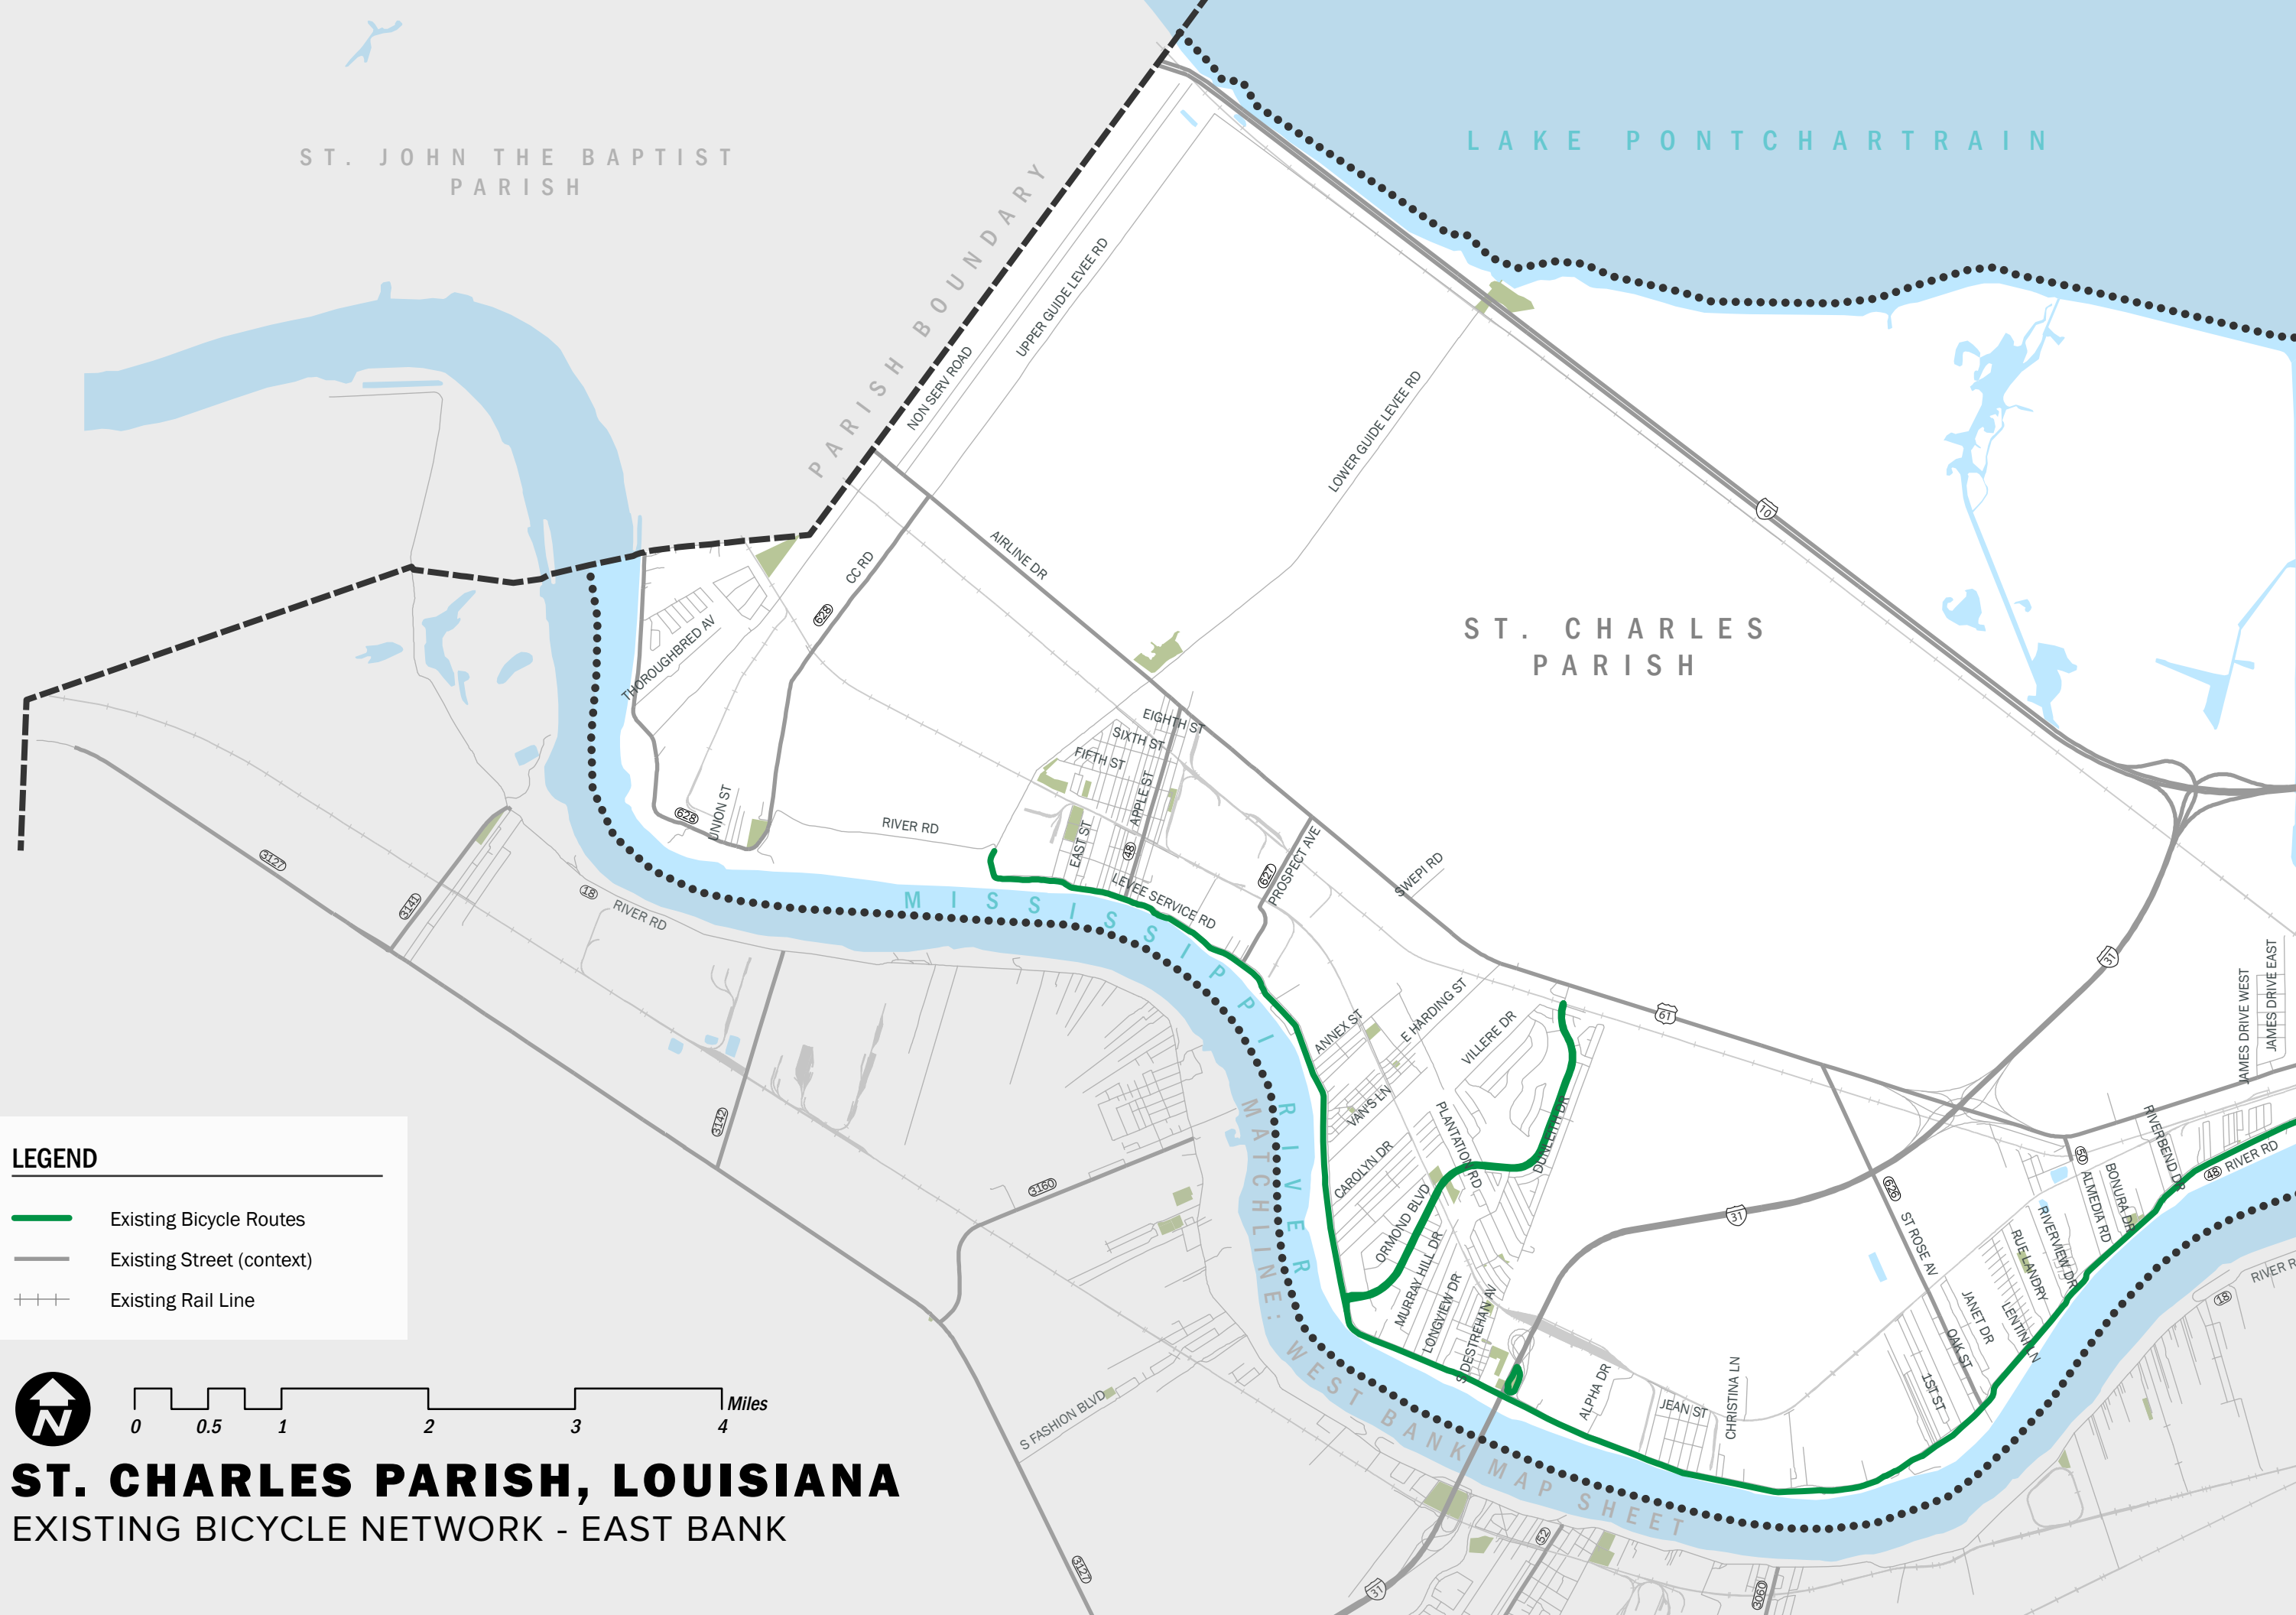

LEGEND
